Peixi Liu

+1 8583491833 | pxl0410@outlook.com | Santa Clara, CA | https://www.linkedin.com/in/peixiliu/

EDUCATION

University of California, Los Angeles | *M.Eng., Artificial Intelligence, GPA: 3.6/4.0* 09/2023 – 12/2024
University of California, San Diego | *B.S. in Math-Computer Science, GPA: 3.6/4.0* 09/2019 – 04/2023

PROFESSIONAL EXPERIENCE

CrossBar, Inc., Marketing Data Analyst Intern, *Santa Clara, CA* 02/2026 – 08/2026

- Analyzed 10+ hardware wallet and Web3 competitors and translated ReRAM, SPU, MPC, and hardware security technologies into 18 technical blogs/newsletters and product content supporting product positioning and GTM strategy.
- Built CRM and email automation workflows achieving up to 77% open and 62% click-through rates; executed campaigns generating $20K+ from 140+ donors, 300+ hackathon submissions, and reaching 1,000+ attendees across 7 industry presentations.

TK Group (Holdings) Ltd., Android Developer Intern, *Shenzhen, China* 06/2023 – 08/2023

- Developed the passenger-side of a ride-hailing Android application using Android Studio and Java, integrating Baidu Maps for real-time positioning, route planning, and navigation, enhancing geolocation accuracy and UX.
- Enhanced ride selection by supporting in-city, exact match, and suggested search with Elasticsearch and PostgreSQL while optimizing routes based on time, cost, distance, and traffic data using Baidu Directions API.
- Integrated an Office Automation System with FineReport, automating order updates, report generation, and reimbursements via RESTful APIs and MySQL, reducing administrative workload.

PROJECTS

Multi-Agent Customer Support Platform 08/2026 – Present

- Developed a fine-grained intent recognition pipeline combining LLM reasoning, embedding similarity, and pattern matching to classify requests, extract structured entities, and identify technical, billing, and general support needs.
- Built a structured multi-agent orchestration system supporting primary/supporting agent selection and parallel collaboration, with dynamic Skills injection and Redis + ChromaDB memory for conversation context, historical summaries, and user profiles.
- Engineered reliable agent tooling with intent-aware RAG, query rewriting and reranking, TTL caching, timeouts, circuit breakers, and fallback handling; implemented online monitoring and LLM-as-Judge evaluation for response quality, regression detection, and routing optimization.

Privacy Policy AI Agent 06/2024 – 08/2024

- Developed a full-stack LLM application for generating regulation-aware privacy policies, integrating a Streamlit frontend with FastAPI APIs and LlamaIndex pipelines for regulation selection, policy generation, and evaluation.
- Built a RAG-based regulatory pipeline using vector retrieval and hierarchical tree summarization to retrieve and process long-form legal documents, generating privacy policies section-by-section across a 12-section standardized structure.
- Designed a multi-model generation and evaluation workflow combining GPT-4o with locally served SaulLM-7B for legal review, using Dockerized Hugging Face TGI, 4-bit NF4 quantization, and structured validation for iterative policy refinement.

Open-Source LLM Evaluation for Joke Explanations 03/2024 – 05/2024

- Built a Python-based LLM benchmarking pipeline to compare Llama 2, Llama 3, Mistral, and Gemma across zero-shot, one-shot, and five-shot prompting on complex joke-explanation tasks, generating 600 responses across 12 model-prompt configurations.
- Developed a multi-metric evaluation framework combining BERTScore with Sentence Transformer embeddings and cosine similarity, benchmarking explanations against GPT-4 Turbo-generated references and human evaluation.
- Analyzed in-context learning and hallucination patterns across models, identifying gaps between semantic-similarity scores and factual correctness and finding Llama 3 achieved 94% human-evaluated accuracy under five-shot prompting.

SKILLS

Languages: Python, Java, C/C++, Go, SQL, JavaScript
AI/ML: LLM Agents, RAG, LlamaIndex, Hugging Face, PyTorch, Scikit-learn, Sentence Transformers
Frameworks & Systems: FastAPI, Redis, ChromaDB, PostgreSQL, Elasticsearch, Spring Boot, MCP
Cloud & DevOps: Docker, Kubernetes, AWS, GCP, Prometheus, GitHub Actions, GitLab CI/CD
